

Good Practices in the Distribution *of Chemicals*

It is known that the distribution sector of Chemicals is an important and complementary part of the productive chain of raw materials. So, through good examples, we have the aim to achieve and influence the ones in charge of the product use process, from the production to the disposal, minimizing the environmental impacts that may happen during the process.

Midland, over time, has been adopting several practices to meet the demands of Occupational Health and Environment, and some of the requirements are mandatory for the fulfillment of the codes and practices of PRODIR – Responsible Distribution Process and the regulation ISO 14001 - Environmental Management System, which are:

- Analyze the risks and hazards of the products in order to mitigate the impacts on the Occupational Health and Environment;
- Provide the MSDS -Material Safety Data Sheet;
- Update yearly the PCMSOs –Occupational Health Medical Control Program of the employees;
- Develop internal documental procedure, with easy access to the employees;
- Identify and manage the legal and regulatory requirements of the company;
- Develop performance indicators to the collect of the emission information, generation and destination of waste, recycling and internal or external reuse;
- Dispose of contaminated packaging for companies specialized and authorised by the relevant environmental bodies;
- Share in our communication channels the good practices adopted by the company.

We want that every distribution segment, our customers and partners remain attentive and continue to seek continuous improvement of their processes and activities.
